

KEIHAN SYSTEMS

STAINLESS STEEL SILENCERS

KEIHAN SYSTEMS silencers are manufactured to the same specifications as the original equipment if not better, both internally and externally. They will fit on the motorcycle with no modifications to mounting brackets, carburation or ignition. Noise output is comparable to the original silencer. They are polished to a mirror finish which has a close resemblance to chrome plating. The manufacture of the silencers is carried out entirely at Keihan's premises by skilled staff to the highest standards. Strict quality control ensures that as much attention is paid to the manufacture and assembly of the internals as to the exterior finish. The welding operations on the silencers are carried out by modern automated techniques to ensure a smooth continuous bead of weld at least to the same standard as the original silencers. Having supplied Keihan products since 1989, here at Motorworks, we can vouch for the high quality and longevity of these systems.

Motorcycles should not have a major component which will deteriorate in such a short period of time causing unnecessary expense, excessive noise and unsightly rust. The long life of KEIHAN SYSTEMS silencers and exhaust pipes are cost effective well within the 10 year guarantee period. Even if the motorcycle is only kept for a short period its resale value is increased with a stainless system fitted.
